Math 107H Calculus II
Section 002

Lecture: MTWF 9:30-10:20 Oldfather (OldH) 208

Instructor: Mark Brittenham **Office:** Avery Hall (AVH) 219
E-mail: mbrittenham2@math.unl.edu **Telephone:** (47)2-7222
WWW: http://www.math.unl.edu/∼mbrittenham2/
WWW pages for this class: http://www.math.unl.edu/∼mbrittenham2/classwk/107f17/

(There you will find copies of nearly every handout from class, lists of homework problems assigned, dates for exams, etc.)

Office Hours: To be determined. I'm also available whenever you can find me in my office and I'm not horrendously busy. You are also quite welcome to make an appointment for any other time; this is easiest to arrange just before or after class, or via email.

Teaching Assistant: Alexandra Janvrin

This course satisfies **ACE Outcome 3**. You will apply mathematical reasoning and computations to draw conclusions, solve problems, and learn to check your answer. Your instructor will provide examples, you will discuss them in class, and you will practice with numerous homework problems. The exams will test how well you've mastered the material.

Advanced Placement Program: If this is the first college mathematics course that you have attempted, then you may be eligible for 5 hours of free credit for Math 106, provided you get a grade of C, P or better in Math 107 this semester. To be considered for this credit, you should register with the Department of Mathematics, 203 Avery Hall early in the semester (no later than by the end of the third week of classes).

Text: *Calculus: Single and Multivariable*, by Hughes-Hallett, Gleason, McCallum, et al. (Wiley, 2011) 6th edition.

This course, as the name is meant to imply, is intended as a continuation of Calculus 1. We will pick things up somewhat before where that course left off, and essentially work our way through the second third of the text. In particular, we will cover (most of) the following chapters of the book:

Ch. 5, The Definite Integral
Ch. 6, Constructing Antiderivatives
Ch. 7, Integration
Ch. 8, Using the Definite Integral
Ch. 9, Sequences and Series
Ch. 10, Approximating Functions Using Series
Ch. 13, A Fundamental Tool: Vectors

Since we are not required (like the 'ordinary' Math 107 classes) to follow a strict timetable, we will have somewhat more freedom to choose which sections we focus on, how deeply we delve into them, and how much time we spend on them. We will spend more time on undertanding <u>why</u> things work than a 107 class can afford to, in addition to developing the 'mechanics' of <u>how</u> things work.

Homework will be assigned from each section, as we finish it. It is an essential ingredient to the course - as with almost all of mathematics, we learn best by doing (again and again and ...). Cooperation with other students on these assignments is acceptable, and even encouraged. However, you should make sure you are understanding the process of finding the solution, on your own - after all, you get to bring only one brain to exams (and it can't be someone else's). For the same reason, I also recommend that you try working each problem on your own, first. Some portion of the homework will be collected and graded; it will count 125 points toward your final grade.

Quizzes will typically be held one day each week (probably Tuesday), at the end of class, unless that week includes an exam (in *our* class...) or a solar eclipse. They will cover material presented in class through the previous Friday (or appropriate corresponding day). Your lowest two quiz grades will be dropped before computing your quiz score, which will count 125 points toward your grade. A missed quiz will count as zero (and will therefore be the first grade dropped); a make-up quiz can be arranged only under the most unusual of circumstances.

Midterm exams will be given two times during the semester, **in the evening, outside of normal class time**, on dates which will be determined in consultation with the class. Each exam will count 100 points toward your final grade. You can take a make-up exam only if there are compelling reasons (a doctor SAYS you were sick, jury duty, etc.) for you to miss an exam.

Finally, there will be a regularly scheduled **final exam**, on Tuesday, December 12, from 10:00am to 12:00noon. It will cover the entire course, with a slight emphasis on material covered after the last midterm exam. It will count 150 points toward your grade.

Your course grade will be based upon this total of $125+125+2\times100+150=600$ points, and will be converted to a letter grade, taking into account the overall average of the class. A score of 90% or better will guarantee some kind of **A**, 80% or better at least some sort of **B**, 70% or better at least a flavor of **C**, and 60% or better at least a **D**.

Stay current! In mathematics, new concepts continually rely upon the mastery of old ones; it is therefore essential that you thoroughly understand each new topic before moving on. Our classes are an important opportunity for you to ask questions; to make sure that you are understanding concepts correctly. Speak up! It's your education at stake. Every topic has to be gotten through, not around. Try to do some mathematics every single day. **Class attendance** is probably your best way to insure that you will keep up with the material, and make sure that you understand all of the concepts. Even more, **stay ahead!** You are strongly encouraged to read the material to be covered in class prior to its presentation in lecture; this will both improve your ability to follow the lecture and help you to focus your attention on any areas where extra effort on your part will be required.

Cell phones should be silenced for the duration of all classes, and extreme restraint should be exercised in answering a call during class. If you feel that you must answer a call, please excuse yourself from the room before beginning to take the call. In addition, you are not allowed to have on your person during exams any device that can access the internet or communicate in any way. Cellphones, Apple watches, etc. should be put away in backpacks/purses for the duration of the exam.

Due to the vast range of **calculators** available these days, with widely differing capabilities, the use of calculators will not be allowed on quizzes or exams. In the end, it is not *what* the answer is but *how we arrive at* the answer which will be most important to us; so only the most routine arithmetic computations need to be carried out before we will declare ourselves to "have" the answer to a problem. (Unless we get <u>really</u> interested in knowing what the final answer actually is...)

The **Math Resource Center** (MRC) is located in Avery 013, and students in Math 107 are encouraged to use this resource if they have questions related to this course, or as a place to meet and discuss material from the course. Hours for the MRC are MTWR 12:30 - 8:30 pm, F 12:30 - 2:30 pm, and Su 1:00 - 5:00pm. Note that the MRC is not open on Saturdays (blame that on the proximity to the football stadium, and university policy to not allow access to bathrooms in academic buildings?).

Departmental Grading Appeals Policy: The Department of Mathematics does not tolerate discrimination or harassment on the basis of race, gender, religion or sexual orientation. If you believe you have been subject to such discrimination or harassment, in this or any math course, please contact the Department. If, for this or any other reason, you believe your grade was assigned incorrectly or capriciously, appeals may be made (in order) to the instructor, the Department Chair, the Departmental Grading Appeals Committee, the College Grading Appeals Committee, and the University Grading Appeals Committee.

ADA Notice: Students with disabilities are encouraged to contact the instructor for a confidential discussion of their individual needs for academic accommodation. It is the policy of the University of Nebraska-Lincoln to provide flexible and individualized accommodation to students with documented disabilities that may affect their ability to fully participate in course activities or to meet course requirements. To receive accommodation services, students must be registered with the Services for Students with Disabilities (SSD) office [www.unl.edu], 132 Canfield Administration, 472-3787 voice or TTY.

Course Evaluation: The Department of Mathematics Course Evaluation Form will be available through your Canvas account during the last two weeks of class. You will get an email when the form becomes available. Evaluations are anonymous and instructors do not see any of the responses until after final grades have been submitted. Evaluations are important—the department uses evaluations to improve instruction. Please complete the evaluation and take the time to do so thoughtfully.

Some important academic dates

Aug. 21	First day of classes, and Total Solar Eclipse.
Sept. 1	Last day to withdraw from a course without a **'W'**.
Sept. 4	Labor Day - no classes.
Oct. 13	Last day to change a course to or from P/NP.
Oct. 16-17	Fall break - no classes.
Nov. 10	Last day to withdraw from a course.
Nov. 22	Student holiday - no classes.
Nov. 23-26	Thanksgiving Vacation - no classes.
Dec. 9	Last day of classes.
Dec. 11-15	Final exam week.
Dec. 12	Math 107H final examination.
