

Basic integration formulas

$$\int x^n dx = \frac{x^{n+1}}{n+1} + C$$

$$\int \frac{1}{x} dx = \ln|x| + C$$

$$\int a^x dx = \frac{a^x}{\ln a} + C$$

$$\int \sin x dx = -\cos x + C$$

$$\int \cos x dx = \sin x + C$$

$$\int \sec^2 x dx = \tan x + C$$

$$\int \sec x \tan x dx = \sec x + C$$

$$\int \csc^2 x dx = -\cot x + C$$

$$\int \csc x \cot x dx = -\csc x + C$$

$$\int \tan x dx = \ln|\sec x| + C$$

$$\int \cot x dx = \ln|\sin x| + C$$

$$\int \sec x dx = \ln|\sec x + \tan x| + C$$

$$\int \csc x dx = -\ln|\csc x + \cot x| + C$$

$$\int \frac{1}{\sqrt{a^2 - x^2}} dx = \arcsin\left(\frac{x}{a}\right) + C$$

$$\int \frac{1}{x^2 + a^2} dx = \frac{1}{a} \arctan\left(\frac{x}{a}\right) + C$$

$$\int \frac{1}{x\sqrt{x^2 - a^2}} dx = \frac{1}{a} \operatorname{arcsec}\left|\frac{x}{a}\right| + C$$

u -substitution:

$$\int g(f(x)) \cdot f'(x) dx = \int g(u) du \Big|_{u=f(x)} + C$$

Special case: $\int \frac{f'(x)}{f(x)} dx = \ln|f(x)| + C$

Integration by parts:

$$\int u dv = uv - \int v du + C$$

Partial Fractions: to integrate a function like $\frac{ax + b}{(x + c)(x + d)}$:

Write $\frac{ax + b}{(x + c)(x + d)} = \frac{A}{x + c} + \frac{B}{x + d} = \frac{A(x + d) + B(x + c)}{(x + c)(x + d)}$,

so $ax + b = A(x + d) + B(x + c) = (A + B)x + (Ad + Bc)$, so $a = A + B$ and $b = Ad + Bc$; solve for A and B .

The approach for more general denominator can be found in nearly any calculus textbook.
